TAO kinases, and related polypeptides, are used to screen for modulators of stress responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinases; and (b) in the form of fragments, for detecting TAO kinases; and (b) in the form of fragments, for detecting TAO kinases. TAO kinases are highly specific for MEK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

antipsoriatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; cimmunostimulant; cardiant; thrombolytic; coagulant; vasotropic; coagulant; vasotropic; coagulant; vasotropic; coagulant; proteinsive; dermatological; immunosuppressive; coantininflammatory; antibacterial; antiviral; antifungal; antirheumatic; coantithyroid; and antianaemic. The sequences can be used for determining coagulant; conditions associated with an ORFX-associated disorder. The presence of or predisposition to, or preventing or treating coagular cardiscal conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy certors. The proteins and nucleic acids may be used to treat concers, cordiferative disorders, neurodegenerative disorders, osteoarthritis, collectors. The proteins and nucleic acids may be used to treat concers, cordiferative disorders, osteoarthritis, collectors, hypothyroldism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, collectorial or fungal infection, malaria, autoimmune disorders, asthma, allegatic anaemia burner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its cDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, anaemia, adult respiratory distress syndrome, allergies, amyloidosis, psoriasis, autoimmune haemolytic anaemia, autoimmune thyroiditis, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), and myelofibrosis; cancers such as adenocarcinoma and leukaemia, cardiovascular diseases such as myocardial infarction and hypertension; and lipid disorders such as fatty liver and cholestasis. PKIN cDNA is useful to detect upstream sequences such as promoters and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germline gene therapy for treating the above mentioned disorders. The present sequence is human kinase (PKIN)-7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human kinase proteins (PKIN) useful for diagnosing, treating, preventing immune disorders, cardiovascular diseases and disorders affecting growth and development associated with abnormal expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and KDS2 have Glu/Gln-rich regions at their C-terminus (see also AAW97678-79) suggesting an alpha-helical structure that may play a role in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method for producing KDS polypeptides in host cells is provided. Since KDS molecules have kinase activity, they are useful as modulating agents in regulating a variety of cellular processes such as signal transduction pathways. These pathways may regulate cytoskeleton, secretion, growth, apoptosis, superoxide generation, and specific gene transcription. KDS polypeptides and polynucleotides can be used for treating disorders involving aberrant expression of mammalian KDS genes. They can also be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, completely which represent the human ORFX open reading frames 1 to 3161. The ORFX open preading frames 1 to 3161. The open present frame frames open preading frames open pressive; antidiabetic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating open the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating concluded candidates of predistance of or predisposition to, or preventing or treating or treating or treating of the presence of or predisposition to, or preventing or treating or treating of the presence of or predisposition to, or preventing or treating or treating of the presence of or predisposition to, or preventing or treating or treating of the presence of or predisposition, and antide preventing or treating o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-APR-1999;

Novel kinase-related polypeptides used for the diagnosis and of kinase-related diseases and disorders  $\,$ treatment

Page 312-315; 387pp; English.

This sequence represents a consensus peptide sequence conained in novel CC STE20-related protein kinases. The invention relates to a nucleic acid CC molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, CC STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 CC sand PAK5. The proteins are used to identify agonists and antagonists, and consists and pak5. The polynucleotides, polypeptides, antibodies, antagonists and agonists may be used to treat diseases such as immune-related disorders and diseases (e.g. treumatoid arthritis, artherosclerosis, chronic cinflammatory bowel disease (e.g. Crohn's disease), asthma, constantify, costeoarthritis, psoriasis, atherosclerosis, rhinitis, autoimmunity, cc and organ transplantation, chronic fifammatory pelvic disease, multiple sclerosis, organ transplantation, myocardial infarction, cardiovascular disease, stroke, renal failure, oxidative stress-related neurodegenerative disorders (e.g. amylotrophic lateral sclerosis, cardingsories, inflammatory disorders, diabetes mellitus, fibrotic and mesangial disorders. The proteins may also be useful for cell growth cander immunocumpresents. immunosuppressants.

These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              An isolated polynucleotide for treating diseases associated encoded polypeptide such as cancer and multiple sclerosis -

polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). Two kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TWO kinases.

TWO kinase polynucleotides can be used: (a) for recombinant expression of TWO kinases; and (b) in the form of fragments, for detecting TWO kinase polynucleotides in standard hybridisation and amplification tests. TWO kinases are highly specific for MEK3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Дb
This sequence represents a novel STE20-related protein kinase. The invention relates to nucleic acid molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 and PAK5. The proteins are used to identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, antibodies, antibodies, antibodies, antibodies, antibodies, antibodies, antibodies, antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antirheumatic; antiathritic; antiinflammatory; antiallergic; osteopathic; antipsoriatic; antiarteriosclerotic; antiasthmatic; immunosupressive; neuroprotective; cardiant; cerebroprotective; cytostatic; antidiabetic; vulnery; STE20; protein kinase; STLK2; STLK3; STLK4; STLK5; STLK5; STLK7; SC1; 2C2; 2C3; 2C4; KHS2; SULU1; SULU3; GEK2; PAK4; PAK5; antagonist; antibody; gene therapy; rheumatoid arthritis; artherosclerosis; asthma; inflammatory bowel disease; Crohn's disease; osteoarthritis; psoriasis; rhinitis; autoimmunity; organ transplantation; multiple sclerosis; myocardial infarction; cardiovascular disease; stroke; renal failure; myocardial infarction; cardiovascular disease; stroke; renal failure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human bone marrow cDNA library. A clone (see AAX07075) encoding the highly homologous KDS2 (see AAW97677) was also obtained. Both KDS1 and KDS2 have Glu/Gln-rich regions at their C-terminus (see also AAW97678-79) suggesting an alpha-helical structure that may play a role in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method for producing KDS polypeptides in host cells is provided. Since KDS molecules have kinase activity, they are useful as modulating agents in regulating a variety of cellular processes such as signal transduction pathways. These pathways may regulate cytoskeleton, secretion, growth, apoptosis, superoxide generation, and specific
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       novel protein associated with signal transduction. KDS1 has a kinase domain related to that of Ste20 (KDS1 = Kinase Domain related to Ste20). KDS1 cDNA (see AAX07074) was isolated from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 30; Page 78-81; 100pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                    transcription. KDS polypeptides and polynucleotides can be for treating disorders involving aberrant expression of alian KDS genes. They can also be used for detection, nosis and drug screening.

It is expressed in reproductive, haematopoletic/Immune and nervous tissues and is found to be homologous to serine/threonine protein kinase. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human cell sig

                     AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immunostimulant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antifungal; antitheumatic; antithyroid; antianaemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism, SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention relates to nucleic acid molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KH32, STLW1, SULU3, GEK2, PAK4 and PAK5. The proteins are used to identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, antibodies, antagonists and agonists may be used to treat diseases such as immune-related disorders and diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. crohn's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, rhinitis, autoimmunity, and organ transplantation, chronic inflammatory pelvic disease, multiple sclerosis, organ transplantation, myocardial infarction, cardiovascular disease, stroke, renal failure, oxidative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     stress related neurodegenerative disorders (e.g. amylotrophic lateral sclerosis, Parkinson's disease and Leigh syndrome), cancer, cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes mellitus, fibrotic and mesangial disorders. The proteins may also be useful for cell growth regulation (e.g. in wound healing), T cell activation, mitosis control, and as immunosuppressants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           oxidative stress-related neurodegenerative disorder; Parkinson's disease; amylotrophic lateral sclerosis; Leigh syndrome; cancer; cardiomyopathy; ischemic disorder; inflammation; diabetes mellitus; fibrosis; mitosis; mesangial disorder; growth regulation; wound healing; T cell activation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel kinase-related polypeptides used for the diagnosis and treatment of kinase-related diseases and disorders \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 11; Page 296-299; 387pp; English.
